QL65I7SA

TECHNICAL DATA

Red Laser Diode

Features

InGaAIP laser diode

Peak Wavelength: 658 nm

Optical Ouput Power: 30 mW

Package: 5.6 mm, with Photo Diode

Electrical Connection

Pi	Bottom View	
10 03	m-type PIN Function	BOTTINK VIEW
LD A PD	1 LD Cathode	->-\(\psi\)\(\psi\)\(\psi\)
	2 LD Anode, PD Cathode	
	3 PD Anode	2
°2		

Absolute Maximum Ratings ($T_C=25$ °C)

Item	Symbol	Value	Unit	
Optical Output Power	P _o (CW)	35	mW	
Optical Output Fower	Po (pulse)	50	IIIVV	
LD Reverse Voltage	V _R (LD)	2	V	
PD Reverse Voltage	V _R (PD)	30	V	
Operating Case Temperature	T _C	-10 +70	°C	
Storage Temperature	T _{stq}	-40 + 85	°C	

Specifications (T_C=25°C)

Item		Symbol	Min.	Тур.	Max.	Unit			
Optical Specifications									
Optical Output Power (CW)		Po	-	30	-	mW			
Peak Wavelength		λ_{P}	-	658	665	nm			
FWHM Beam Divergence		θ∥	7.0	9.5	13.0	deg			
F vvi livi Bealti Divergence		θΪ	18	22	26	deg			
Emission Point Accuracy	Angle	Δθ∥	-	•	±3.0	deg			
		Δθ⊥̈	-	•	±3.0	deg			
Astigmatism		As	-	•	±60	μm			
Electrical Specifications									
Threshold Current		I _{th}	-	35	50	mA			
Operating Current		l _{op}	-	65	100	mA			
Slope Efficiency		η	0.7	1.0	1.3	W/A			
Operating Voltage		U_{op}	-	2.0	2.4	V			
Monitor Current		l _m	0.05	0.3	1.5	mA			

The above specifications are for reference purpose only and subjected to change without prior notice.

Safety of Laser light

Laser Light can damage the human eyes and skin. Do not expose the eye or skin directly to any laser light and/or through optical lens. When handling the LDs, wear appropriate safety glasses to prevent laser light, even any reflections from entering to the eye. Focused laser beam through optical instruments will increase the chance of eye hazard.

Cautions

1. Operating methode

- This LD shall change its forward voltage requirement and optical ouput power according to temperature change. Also, the LD will require more operation current to maintain same ouput power as it degrades. In order to maintain output power, use of APC (Automatic Power Control) is recommended. Which use monitor feedback to adjust the operation current.
- Confirm that electrical spike current generated by switching on and off does not exceed the maximum operating current level specified herein above as absolute maximum rating. Also, employ appropriat countermeasures to reduce chattering and/or overshooting in the circuit.

2. Static Electricity

• Static electricity or electrical surges will reduce and degrade the reliability of the LDs. It is recommended to use a wrist trap or anti-electrostatic glove when handeling the product.

3. Absolute Maximum Rating

Active layer of LDs shall have high current density and generate high electric field during its
operation. In order to prevent excessive damage, the LD must be operated strictly below
absolute maximum rating.
